

That's correct!

Question 4

1 / 1 pts

A product layout is also known as a:

- ☒ Line-flow layout
- ☐ Fixed-position layout
- ☐ Activity-settings layout
- ☐ Flexible-flow layout

That's correct!

Question 5

1 / 1 pts

Which is a manufacturing facility layout type listed in the session content?

- ☐ Advertising layout
- ☐ Incentive layout
- ☐ Forecasting layout
- ☒ Cellular layout

That's correct!

Question 6

1 / 1 pts

A process layout is associated with:

- ☐ A product that remains stationary
- ☐ Strictly office cubicles only
- ☐ High-volume assembly lines with identical routing
- ☒ A job shop with flexible flow and varied process requirements

That's correct!

Question 7

1 / 1 pts

The weighted factor rating (weighted score) method is best described as:

- ☐ Forecasting demand using exponential smoothing
- ☒ Assigning weights and scores to location factors to compare alternatives
- ☐ Choosing a location randomly to avoid bias
- ☐ Picking the site with the lowest land cost only

That's correct!

Question 8

1 / 1 pts

Traditional office layouts are characterized by:

- ☐ Workstations arranged only as an assembly line
- ☒ Private offices
- ☐ Storage racks optimized for forklifts
- ☐ Workers constantly moving among activity zones

That's correct!

Question 9

1 / 1 pts

In line balancing, a typical assumption stated is:

- ☐ One station is chosen for multiple lines without constraints

Correct!

One workstation is assigned to multiple products simultaneously

One worker is assigned to one workstation

One worker performs all tasks in the entire line

That's correct!

Question 10 1 / 1 pts

Office layout design procedures often try to maximize:

The number of warehouses per building

The distance between interacting workers

Proximity of workers whose jobs require frequent interaction

The number of private offices regardless of need

That's correct!

Question 11 1 / 1 pts

"Office landscaping" commonly refers to:

Warehouse cross-docking

Job-shop departments

Cubicles partitions

Factory fixed-position stations

That's correct!

Question 12 1 / 1 pts

A key objective of retail layout is:

Maximizing warehouse inward flow only

Eliminating precedence constraints

Minimizing theoretical minimum stations

Maximum customer exposure to as many products as possible

That's correct!

Question 13 1 / 1 pts

Technological precedence requirements mean:

Tasks can be done in any order without restrictions

Certain tasks must be completed before others can begin

Tasks are determined only by marketing priorities

All tasks must take exactly the same time

That's correct!

Question 14 1 / 1 pts

Which is a way of reducing capacity?

Reactivating facilities

Selling existing facilities

Expanding and updating facilities

Developing sites and buying equipment

That's correct!

Question 15

1 / 1 pts

A key factor in office design, besides interaction needs, is:

- ☐ Product-focused flow
- ☐ Seasonality
- ☒ Privacy
- ☐ Load distance

Correct!

That's correct!

Question 16

1 / 1 pts

Which is a way of expanding capacity?

- ☒ Subcontracting
- ☐ Phasing out products without replacement
- ☐ Selling existing facilities
- ☐ Reducing inventories only

Correct!

That's correct!

Question 17

1 / 1 pts

Which statement about fixed-position layout is correct?

- ☒ It has the poorest space utilization and is difficult to make efficient
- ☐ It is the standard approach for job shops
- ☐ It is used primarily for retail display planning
- ☐ It provides the best space utilization of all layouts

Correct!

That's correct!

Question 18

1 / 1 pts

The load-distance method is primarily used to:

- ☐ Determine product life cycle stage
- ☐ Decide office privacy rules
- ☒ Evaluate location alternatives using loads and distances
- ☐ Balance an assembly line

Correct!

That's correct!

Question 19

1 / 1 pts

If a line must produce 2,400 units per week and operates 60 hours per week, the desired output rate is:

- ☐ 60 units per hour
- ☐ 2,400 units per hour
- ☐ 24 units per hour
- ☒ 40 units per hour

Correct!

That's correct!

Question 20

1 / 1 pts

In an Activity-on-Node (AON) network:

- ☐ Nodes represent costs and arcs represent revenues
- ☐ Nodes represent warehouses and arcs represent trucks
- ☒ Nodes represent activities and arcs represent precedence relationships
- ☐ Arcs represent activities and nodes represent precedence

Correct!

That's correct!
