

That's correct!

**Question 4**

1 / 1 pts

Capacity management is described as an iterative process that involves continuous:

- ☐ Expanding capacity every quarter
- ☐ Ignoring performance feedback
- ☒ Monitoring, analysis, and adaptation
- ☐ Hiring freezes and salary cuts only

Correct!

That's correct!

**Question 5**

1 / 1 pts

Which formula represents effective capacity (as given in the session)?

- ☐ Effective capacity = Total revenue – Total costs
- ☒ Effective capacity = Design capacity × Efficiency
- ☐ Effective capacity = Design capacity + Efficiency
- ☐ Effective capacity = Fixed costs + Variable costs

Correct!

That's correct!

**Question 6**

1 / 1 pts

Which of the following is listed as a capacity planning strategy?

- ☐ Office landscaping
- ☐ Delphi method
- ☐ House of Quality
- ☒ Lead time management

Correct!

That's correct!

**Question 7**

1 / 1 pts

Demand management starts with analysing historical data to identify:

- ☐ Patents, trademarks, and licensing terms
- ☒ Patterns, trends, and seasonality in customer demand
- ☐ Employee performance ratings only
- ☐ Dividend payouts and capital structure

Correct!

That's correct!

**Question 8**

1 / 1 pts

Which is listed as a risk that may affect demand?

- ☒ Changes in market conditions
- ☐ Perfectly stable regulations always
- ☐ Zero competition in all markets
- ☐ Fixed-position layout

Correct!

That's correct!

**Question 9**

1 / 1 pts

After bottlenecks are identified, strategies to address them may include:

**Correct!**

- ☐ Reducing all capacities uniformly
- ☐ Ignoring the constraint to improve non-bottlenecks first
- ☒ Reallocating resources
- ☐ Eliminating forecasting activities

That's correct!

**Question 10** 1 / 1 pts

Which is a common sign of bottlenecks?

- ☐ Zero variation in demand
- ☒ Queues and excessive wait times
- ☐ No work-in-process inventory
- ☐ Perfectly balanced workloads everywhere

That's correct!

**Question 11** 1 / 1 pts

A strategy to address bottlenecks is:

- ☒ Upgrading technology
- ☐ Increasing random variation
- ☐ Eliminating quality checks
- ☐ Reducing maintenance permanently

That's correct!

**Question 12** 1 / 1 pts

Why is design capacity often higher than effective capacity?

- ☒ Effective capacity reflects what can realistically be achieved
- ☐ Design capacity assumes normal operating conditions only
- ☐ Effective capacity ignores real-world constraints
- ☐ They are always equal in practice

That's correct!

**Question 13** 1 / 1 pts

Which formula represents design capacity?

- ☐ Design capacity = Fixed costs ÷ Contribution margin
- ☒ Design capacity = Number of units × Time period
- ☐ Design capacity = Effective capacity ÷ Utilization
- ☐ Design capacity = Design capacity × Efficiency

That's correct!

**Question 14** 1 / 1 pts

Demand management is best described as the systematic process of forecasting, understanding, and:

- ☒ Influencing customer demand for a product or service
- ☐ Removing customer feedback from planning
- ☐ Replacing capacity planning entirely

- ☐ Eliminating customer demand variability

That's correct!

#### Question 15

1 / 1 pts

Which of the following is listed as a capacity planning strategy?

Correct!

- ☒ Buffer management
- ☐ Trend projection
- ☐ Break-even point
- ☐ Job rotation

That's correct!

#### Question 16

1 / 1 pts

In the Theory of Constraints (TOC), a constraint is:

Correct!

- ☐ Only an HR policy
- ☐ Only a marketing limitation
- ☒ Any factor that limits system performance and restricts output
- ☐ Only a financial metric

That's correct!

#### Question 17

1 / 1 pts

The goal of capacity management includes ensuring the right resources while maintaining:

Correct!

- ☐ High lead times for stability
- ☐ Minimum customer responsiveness
- ☒ Cost-effectiveness and flexibility
- ☐ Maximum inventory at all times

That's correct!

#### Question 18

1 / 1 pts

Demand planning involves collaboration with stakeholders such as:

Correct!

- ☐ Only the legal department
- ☐ Only external auditors
- ☐ Only customers
- ☒ Sales, marketing, production, and supply chain teams

That's correct!

#### Question 19

1 / 1 pts

The ratio of effective capacity to design capacity is known as the:

Correct!

- ☐ Break-even ratio
- ☒ Efficiency ratio
- ☐ Utilization index
- ☐ Contribution margin ratio

That's correct!

Question 20

1 / 1 pts

A bottleneck is best described as:

- ☐ Any step with the lowest fixed cost
- ☐ A process with the highest automation
- ☐ Any step with the highest number of employees
- ☒ A constraint limiting the overall throughput or capacity of a system

Correct!

That's correct!
